

Rob has been in the construction industry since the early 1980s and has performed all aspects of construction from pouring the foundation of a house, to electrical wiring, plumbing, HVAC and roofing installations.

Rob is a certified radon tester and mitigation specialist who received his training at Rutgers University in NJ. It is Rob's belief that safety is the number one reason radon systems need to be installed.

Along with safety comes quality installation and an ascetic value. Installing radon mitigation systems has been a passion for Rob since he owned his first home and it tested high for radon. Rob's daughter was only 6 months old at the time and as always the safety of the family comes first so Rob educated himself on all aspects of radon testing, mitigation and health effects.

Seeing the need for a quality radon mitigation company was the brainchild behind the formation of Lunny Environmental.

Lunny Environmental is a full service company specializing in evaluating and addressing all of your radon needs. From detection and testing to installation of radon mitigation systems or repair of existing systems, our professional team is ready to ensure that your property is radon safe.

Lunny Environmental performs radon testing and remediation services for homeowners and real estate professionals; for residential homes as well as schools and commercial buildings. We install safe, quiet and effective state-of-the-art radon remediation systems in all types of buildings as well.

**DEP Certified Radon Testing and Mitigation Specialists**

The professionals at Lunny Environmental are fully certified by the Department of Environmental Protection and carry all the required knowledge to successfully remediate any radon problem in any type of building.

**Lunny's Guarantee**

- 5 Year Guarantee
- Below 4 pCi/l
- Instant Results for Tests
- Transferable Warranties

A properly operating septic system is a vital part of many homes located in rural areas. However, the septic system is often the last thing on the mind of a homeowner until there is a problem with the system.

**When a home is purchased, the big question is...**

*"How do I know if the septic system is functioning properly?"*

A septic system inspection performed by Lunny Environmental will yield useful information as to the condition of the system. We have been performing septic system inspections for over 15 years and are very familiar with all types of systems. You will receive a written report that details the components of the system and how they are functioning.

How long a system lasts is based on many factors such as usage, maintenance and soil conditions. Having an inspection performed on the septic system can provide pertinent information which can save the purchaser unexpected expense and extend the life of the system.

Lunny Environmental is certified by the Pennsylvania Septage Management Association. All inspections are performed in accordance with PSMA guidelines.

*Let Lunny Environmental provide you with other testing and systems services*

**✓ Wood Destroying Insect Inspections & Certifications**

A visual inspection is conducted in the readily accessible areas of the structure to determine the presence or absence of visual evidence of wood destroying insects.

**✓ Mold Testing & Evaluations**

Mold testing can tell you if you have a mold problem in your home. Mold tests can also help you find hidden mold, measure your indoor air quality and identify what species of mold is in your home.

**✓ Well Water Testing**

As an individual water system owner, it is up to you to make sure that your water is safe to drink. A water quality indicators test measures the presence of bacteria contamination in water.
